PROFESSIONAL PROFILE

DevOps engineer with 8+ years of experience building highly available and fault-tolerant systems. Specialized in Kubernetes, AWS, and observability at scale (OpenSearch/ELK). Brings a strong programming foundation with solid Python skills and a continuous learning mindset, backed by certifications such as CNCF Kubestronaut and AWS Solutions Architect.

Recognized for self-management and a strong sense of commitment and ownership. The engineer to look for when a robust and well-documented solution is required for problems where no one knows where to start.

Driven by a strong documentation culture, naturally becomes the Knowledge Base maintainer in every team. Active open-source contributor with [PRs merged](#) into large projects including OpenSearch, Fluent Bit, External Secrets Operator, and OpenCTI. Shares personal experiences on the www.carlosneto.dev blog.

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | Trustly Inc. (Open Banking Platform)

📅 November 2021 – Present

Work as a Senior DevOps Engineer at a Swedish fintech company, supporting Open Banking solutions across the US and Europe on a 24/7 AWS cloud infrastructure, as featured in an [AWS case study](#).

Lead log analytics initiatives, developing ingestion pipelines with Fluent Bit and Logstash and managing a large-scale OpenSearch cluster (30 nodes and more than 100 TB of storage across hot, warm, and searchable tiers) running on Kubernetes. Optimized the cluster for 2K logs per second, with logs available in OpenSearch Dashboards within 5 seconds of application generation. Deep hands-on experience with [open-source contributions](#) to OpenSearch and Fluent Bit, based on real-world optimization cases.

Technical reference in Helm and Python, translating business and operational needs into engineering conventions and ensuring their adoption through AI skills and agents for convention-based code generation and PR reviews using Claude and OpenCode.

Led the adoption of Helm Charts at the company, establishing authoring conventions and providing team training. Implemented a chart lifecycle process using GitHub Actions to build and publish charts to ECR and Argo CD to manage their deployment.

Contributor to the company's internal platform and IaC framework, ensuring the delivery of systems based on GitOps and CI/CD practices using OpenTofu, Terragrunt, Helm, and Argo CD.

Main contributor to the company's Knowledge Base. Documented all operational tasks of the DevOps team by authoring more than 100 Confluence pages. Recognized across the company for attention to detail and maintaining accurate, up-to-date documentation.

Technologies: AWS, EKS, Karpenter, Bottlerocket, OpenSearch, Logstash, Fluent Bit, Helm, Argo CD, Terraform, OpenTofu, Terragrunt, Kong, Istio, External Secrets Operator, Cert Manager, GitHub Actions, Python, Bash, Confluence, Jira, Claude, OpenCode

Python Developer | Fotosensores (IoT Traffic Enforcement System)

📅 April 2018 – October 2021

Worked as a Python Developer focused on observability and system integration at a traffic enforcement company operating speed camera systems across all regions of Brazil.

Led the company's observability systems, integrating metrics, alerts, and logs into unified dashboards for the technical maintenance and support team, and improving the company's SLO/SLA performance by 30%.

Served as the team's Python technical lead, leading projects for the secure and encrypted transmission of vehicle images to government systems, including [CSI - Security and Intelligence Center](#).

Created and maintained the company's internal Knowledge Base using Sphinx, documenting technical processes and architectural decisions.

Technologies: Python, Zabbix, Prometheus, Grafana, Loki, OpenStreetMap, RabbitMQ, ZeroMQ, Ansible, AWX, CentOS.

CERTIFICATIONS

CNCF Kubestronaut

AWS Solutions Architect

CKS: Kubernetes Security Specialist

CKA: Kubernetes Administrator

CKAD: Kubernetes Developer

KCSA: Kubernetes Security

KCNA: Kubernetes and Cloud Native

ICA: Istio

KCA: Kyverno

LFCS: Linux

PCA: Prometheus

CBA: Backstage

CNPA: Cloud Native Platform Engineering

CAPA: Argo

CGOA: GitOps

GitLab Associate

GitHub Actions

AWS Cloud Practitioner

EDUCATION

Systems Analysis and Development (Higher Education) | FATEC (2016 – 2019): Public technology college located in São Paulo, within the [PIT SJC technology hub](#). Graduated without failing any courses, ranking among the top students in the class.

Computer Networks (Technical Course) | ETEC (2016 – 2017): Public technical education institution. Graduated among the top students in the class, recognized for a practical approach and hands-on work with IoT systems.
